Juliana Parente, et al. Attv. Docket No. 006943,00889

U.S. Patent Application Serial No. 10/727,128

.s. Patent Application Serial No. 10/727,128

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph 34 with the following new paragraph:

The food grade acid component which is added to the calcium-augmented juice flow

according to the invention is a food grade acid source. Exemplary acids in this regard include

malic acid, phosphoric acid, fumaric acid, benzoic acid, adipic acid, gluconic acid, and lactic

acid, and goinic acid, and combinations of these. The preferred acid source is malic acid.

The quantity of acid source within the NFC juice ranges between about 5 pounds and about

70 pounds (about 2.3 kilograms and about 31.7 kilogram) per 1,000 gallons of fortified

beverage, based upon a malic acid content. This is between about 0.06 and 0.8 weigh percent,

based on the total weight of the fortified beverage. A preferred range is between about 20

pounds and about 45 pounds (between about 9 kilograms and about 13.6 kilograms).
